

# *Adenostoma fasciculatum* 'Nicolas'

## Prostrate Chamise

LOW SHRUB—evergreen

1' high, 3 to 5' spread.

Small, narrow, dark green leaves.

Creamy white flowers in clusters — early spring to late summer.

Horticultural selection, developed from cuttings from

*A. fasciculatum* from San Nicolas Island.

Full sun to part shade.

Originally found thriving on well-drained soil, but is known to grow well, though slowly, on clay/cobble soil, if provided light weekly water.

Good in rock gardens.
