

Chilopsis linearis 'Maggie's Pink'

Maggie's Pink Desert Willow

TREE

15-25' high, to 15' wide.

Willow-like, weeping, typically multi-trunked.

Leaves linear, curved 5-10"; winter deciduous.

Flowers in terminal racemes, fragrant, vibrant shades of pink.

Native Habitat: Sandy desert washes. Northern Mexico to Utah, New Mexico, Arizona and southeast California.

Photographs by Greg Rubin

Full sun.

Best in sandy soils, but tolerates less well-drained soils.

Does best with moderate summer water: think monsoon rains.

Fast grower.

Attracts hummingbirds and bees.

Can be pruned to single trunk.
