

# *Dudleya abramsii*

## Abrams' Dudleya

Photographs by Vince Scheidt

PERENNIAL SUCCULENT - evergreen.

Forming clumps.

Oblong, slightly tapered leaves in basal rosette.

Flowers pale yellow with reddish lines at the keel; branched  
- spring.

Native habitat: rocky places, 2500' to 6000' - Peninsular Ranges  
to northern Baja California.

Sun to partial shade. Frost tolerant.

Do not water in summer unless in sandy soil or in a container.

Use in rock gardens or containers.

Good as long-lived specimen plant.
