

# *Lasthenia californica*

## Goldfields

Photographs by Margaret L. Fillius

### ANNUAL

To 10" high: can spread along the ground from main stem.  
Flowers bright yellow - February to June.

Native habitat: many habitats below 5000' - throughout California to southwest Oregon, Arizona and Mexico.

Full sun.

Watering will produce more abundant and longer flowering.

Good groundcover, or a low plant in a mixed border.
