

# *Baccharis 'Centennial'* Centennial Desert Broom

Male flower/plant

Female flower/plant

Photographs by Craig Denson

Note: photos depict *B. sarothroides*.

## PERENNIAL SHRUB

2'-3' high, 4'-6' wide, mounding.

Many branched green stems, trailing to ascending. Woody with age.

Leaves narrow, green, evergreen.

Plant dioecious, male flowers white, female creamy; abundant in fall.

Native Habitat: this is a hybrid cultivar: Parents occupy chaparral, sage scrub and desert areas, under 4500'.

Full sun

Most soils, not standing water.

Water 1 - 2x/month, if needed.

Less water promotes denser growth.

Good on slopes, or as border.

Prune in winter if needed.

Note: photo depicts a different, but similar cultivar.
