

Ericameria ericoides

Mock Heather, California Goldenbush

Photographs by Jean Pawed, Calphotos

PERENNIAL SHRUB

2-3.5' high, 3-4' wide; mounding.

Dense foliage of comblike fans of small cylindrical leaves.

Yellow flowers, in clusters of several radiate heads - summer, fall.

Native Habitat: coastal dunes and hills from San Francisco to Los Angeles
- under 1500'

Full sun

Well drained, sandy soil.

Can tolerate saline soil.

Very low water; 0-1x/month in summer

Good as a low, coastal ground cover.
Typically less than 2' high.
